Welcome to *NeuroRegulation*, Volume 3, Number 4. We wish to thank all students, researchers and clinicians who submitted and presented at this year's annual conference in Orlando. It was a pleasure to hear the presentations, and we encourage presenters to take the next step and write up their studies and submit their data to *NeuroRegulation*.

In the current issue authors utilize a variety of novel techniques and report interesting findings. Erik Peper, Shannon Lee, Richard Harvey, and I-Mei Lin present concepts associated with academic performance and methods for improvement. Mark Johnson, Eugenia Bodenhamer-Davis, and Michael Gates present a case series detailing neuromodulation techniques improving symptoms of tinnitus. Additionally, the 2016 ISNR annual conference abstracts are presented in this issue. I had the opportunity to talk with each of the student poster presenters. It was a pleasure to engage these individuals, and I thank them for the opportunity to learn about their projects.

NeuroRegulation thanks these authors for their valuable contributions to the scientific literature for neurofeedback and quantitative EEG. We strive for high quality and interesting empirical topics. We encourage the members of ISNR and other biofeedback and neuroscience disciplines to consider publishing with us. It is important to stress that publication of case reports is always useful in furthering the advancement of an intervention for both clinical and normative functioning. Thus, we encourage all individuals practicing neurofeedback to submit case studies! We thank you for reading *NeuroRegulation*!
